High-pole procedures & acknowledgment

OPERATING PROCEDURES | Use with the signed standalone rate confirmation.

CYA job / load reference

Carrier / customer legal name

Load driver / phone

High-pole operator / phone

Verified loaded height / units

Verified pole setting / units

Height / pole verification method

Verified by / date / time

BEFORE MOVEMENT

Confirm actual loaded height and pole setting with the carrier/load driver, the permitted route, and job requirements. Inspect the pole, mount, vehicle, signs, lights, communication equipment, and required safety gear. Confirm reliable communication and sufficient lead distance for a safe response. Resolve dimension or permit discrepancies before movement. Recheck height and setting when the load, equipment, or conditions change.

POLE CONTACT OR SUSPECTED UNSAFE CLEARANCE

Issue an immediate **STOP** warning to the load driver. Move the escort to a safe position when possible. Do not minimize contact or authorize continued movement. Notify CYA dispatch and the carrier. Clearance must be verified by a safe method before resuming. Do not approach or measure near energized lines; obtain utility assistance when needed.

IF THE DRIVER REFUSES TO STOP

Do not authorize or assist continued unsafe movement. Safely document the concern and notify dispatch. Resume escort support only after the clearance concern is resolved and there is a safe, lawful movement plan.

SERVICE LIMITS AND RECORDS

High-pole service provides observations and warnings, not guaranteed clearance. Road crown, grade, load movement, equipment flex, utilities, construction, and changing conditions can affect clearance. Carrier/load driver remains responsible for permits, routing, load dimensions, securement, and truck/load operation. Each party retains its own safety and legal duties. Record contact, hazards, warnings, verification, and route changes with the job. Charges follow the signed rate confirmation; this sheet establishes no rates.
